Dear Hiring Team at Adani Group,

I am excited to apply for the Back End Engineer – AI Labs opportunity at Adani Group. As a Computer Science undergraduate specializing in AI, Backend Development, and Intelligent Systems, I am eager to contribute my skills in backend engineering, REST API development, AI integrations, ETL workflows, and scalable cloud-based systems to your AI Labs team.

Through my academic projects and internship experiences, I have developed strong foundations in backend development, intelligent automation systems, scalable APIs, workflow automation, and structured data processing using Python, Flask, SQL, AWS, and cloud-integrated technologies. I am particularly interested in building secure and scalable backend systems that support AI-powered applications and real-time processing workflows. During my internship at IIIT Naya Raipur, I developed AI-driven ETL pipelines and backend workflows using Python and SQL for preprocessing, validation, and scalable analytics systems. I also worked on predictive modeling workflows, intelligent automation pipelines, and structured data processing systems supporting AI-driven applications and reporting workflows. During my Deloitte Australia virtual internship, I analyzed multi-source datasets using Python, SQL, Pandas, and Excel to generate operational insights and analytical reports. I also developed Tableau dashboards and automated reporting workflows for business intelligence and stakeholder reporting systems, strengthening my ability to work with scalable analytical workflows and structured backend data systems.

In my Gen-FIR project, I built an AI-powered backend platform for automated FIR analysis, IPC prediction, and intelligent document generation using Python, Flask APIs, SQL, and BERT-based NLP workflows. The system achieved Precision (0.85), Recall (0.76), and F1-score (0.79), while improving Precision by 467

Additionally, I developed InkCredible, a cloud-integrated OCR processing pipeline using AWS Textract, Python, Flask, and ETL workflows for scalable document digitization and structured data extraction. By implementing automated preprocessing, validation workflows, and backend optimization techniques, I reduced extraction error rates by 30

I also have experience with REST API integration, SQL databases, structured data processing, Git/GitHub workflows, cloud-native application concepts, backend automation systems, and scalable workflow development. My interests strongly align with Adani Group's focus on AI-driven backend systems, intelligent automation, scalable APIs, cloud infrastructure, and high-performance backend engineering.

What excites me most about this opportunity is the chance to contribute to large-scale AI platforms and intelligent backend systems that support impactful enterprise solutions and innovation-driven digital transformation initiatives.

I believe my analytical mindset, adaptability, backend engineering foundation, and passion for AI-powered systems would allow me to contribute effectively to your team while continuing to grow in a collaborative and technology-driven environment.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Divya A Kumar
